## Registration Policy

Classes offered to the 'public'.

HDE Technologies, Inc. (HDE) provides comprehensive classroom and hands-on workshop training for 'end users' of industrial lasers. One of the attractions of the HDE classes is the material brought to the class by the attendees and the open un-inhibited technical discussions that take place during the classes.

The acceptance of registration is based on the availability of space at the time the registration is submitted to HDE and the payment of the Registration Fee(s) on time.

To assure the comfort of over 96% of the attendees, HDE reserves the rights to refuse requests for registration from persons working for companies that manufacture or distribute:

- lasers
- laser systems
- optical beam delivery components or systems
- laser beam diagnostic components or systems
- supplies of any kind that are used on lasers or laser systems.

Classes offered 'on-site'.

For over 40 years and in the future HDE Technologies, Inc. (HDE) continues to provide comprehensive classroom and hands-on Workshops for end users of industrial lasers at their sites. The list of courses and topics may be found on a page titled [On-site Training](#), on the HDE website: [www.laserweldtraining.com](http://www.laserweldtraining.com).

The attendance in the 'standard' and the 'customized' on-site classes are typically limited to the employees of the client. In other words, consultants and suppliers are not allowed.

Companies that manufacture or distribute equipment as listed above may make licensing arrangements with HDE to use the HDE laser training material to train their own employees or their clients. Please contact HDE for further details.
